

Telemeta

Open and collaborative web audio platform for digital sound archive management

Guillaume Pellerin¹, Thomas Fillon¹,

3 Related projects

- TimeSide
- SABIOD
- DIADEMS

4 Development

Main goals

- Archive, **preserve** and **scale** big audio data and related metadata
- Process audio data **on demand** through a **modular architecture**
- Play audio data and **read** metadata **synchronously**
- Index and **share** music data through a **collaborative** web app
- Link audio data to various **ontologies**, external **services** and related **medias** (photos, videos, etc)
- Manage users, share and access rules, copyrights easily through time

History of the project

- 2006: definition of the goals (open source web audio collaborative platform)
- 2007: first partner: french Research Center of Ethnomusicology (CREM)
- 2007 - 2009: technical specifications, definition of the DB migrator
- 2008: prototype development
- 2008 - 2010: workflow and format specifications
- 2011: development, final migration and release of **Telemeta 1.0** to the CREM for production : <http://archives.crem-cnrs.fr>
- 2011 - 2014: collaborative indexing, more development, massive data imports...

Bureau Archives Géo-Navigateur Recherche avancée Utilisateurs Admin

Archives sonores du CNRS - Musée de l'Homme

Le fonds d'archives sonores du CNRS - Musée de l'Homme rassemble des enregistrements inédits et publiés de musique et de traditions orales du monde entier, de 1900 à nos jours. Constitué de supports variés (cylindres, 78 tours, disques vinyles, cassettes, supports numériques), ce fonds se positionne parmi les plus importants d'Europe en terme de qualité, de quantité et de diversité.

Pour une présentation historique du fonds, voir [le site du CREM](#).

Contenu

Géré par le [Centre de Recherche en Ethnomusicologie \(CREM\)](#) cette base de données répertorie :

- ✓ Plus de 30 000 documents inédits, dont les 2/3 sont sonorisés, répartie dans plus de 1 000 collections, représentant près de 4 000 heures d'enregistrements de terrain non publiés.
- ✓ Plus de 13 000 enregistrements édités, dont 3 000 sonorisés, dans plus de 4 600 collections, pour environ 3 700 heures (incluant plus de 5 000 disques dont beaucoup sont très rares).
- ✓ 199 pays sont représentés à travers plus de 1 200 groupes ethniques ou sociaux, donnant à entendre une large palette d'expressions musicales et chantées, de langues et de dialectes.

Certains enregistrements sont consultables avec un code d'accès. Pour l'obtenir écrivez à [crem.lesc\(at\)mae.u-paris10.fr](mailto:crem.lesc(at)mae.u-paris10.fr) en expliquant les motifs de votre demande. Le fonds d'archives est également consultable sur les postes dédiés disponibles au [CREM](#), à la [Bibliothèque Eric de Dampierre](#), à la [Médiathèque du Musée du Quai Branly](#) et à la [Bibliothèque du Muséum National d'Histoire Naturelle](#).

Organisation du catalogue

Le catalogue est organisé en 4 niveaux : Fonds, Corpus, Collection et Items. Le niveau principal de description est la Collection. Chacune regroupe un ensemble cohérent de fichiers audio (items) correspondant le plus souvent à des enregistrements collectés au cours d'une même mission de recherche ou à un disque publié. Certaines collections sont elles-mêmes regroupées en corpus et en fonds associés à des collecteurs.

Le nombre d'enregistrements mis en ligne sur la plateforme est en constante augmentation. Les fiches descriptives sont renseignées de manière collaborative par les usagers de la plateforme : chercheurs, étudiants, documentalistes.

Le CREM accueille toutes les collaborations visant à enrichir et valoriser ce précieux patrimoine. Ecrivez-nous à [crem.lesc\(at\)mae.u-paris10.fr](mailto:crem.lesc(at)mae.u-paris10.fr).

Sélection musicale

CREM-CNRS - Item : CNRSH_E_1973_001_001_001_08 Telemeta powered

Géo-Navigateur

A world map with numerous red dots scattered across it, representing collection locations. A legend in the bottom right corner indicates collection types: Ethnographie (yellow), Ethnologie (green), Ethnomusicologie (blue), and Ethnobiologie (orange). A scale bar and a north arrow are also visible.

Dernières modifications

13 juin Rituel Gélédé et masques item a.julien

This section displays a list of recent modifications made to items. It includes the date (13 juin), the title of the modification ('Rituel Gélédé et masques'), the type of change ('item'), and the user who made the change ('a.julien'). Below the list are navigation icons for a digital archive interface.

Extend the usecases

Usages

- **Research** and **share** audio data and collaborate online and with other researchers or communities.
- **Teach** with music and audio materials for lessons, academic works and exams.
- **Publish** documented audio ressources from interactive kiosks (full access given to IP ranges)

Domains

- Musicology
- Anthropology
- Museology
- Computer science
- Biology
- Ecology

1 Overview

- User Interfaces

3 Related projects

- TimeSide
- SABIOD
- DIADEMS

4 Development

Technologies

100% Open Source!

- Python : cool and smart object oriented language
- Django : high-level web MVC framework
- GStreamer : open source multimedia framework
- TimeSide : open web audio processing framework
- MySQL, PostgreSQL, others : relational databases
- GNU / Linux : applications, libraries and kernel

Architecture

Key features

- Pure HTML5 web user interface including dynamical forms and smart workflows
- On the fly audio analyzing, transcoding and metadata embedding in various formats
- Social editing with semantic ontologies, smart workflows, realtime tools, human or automatic annotations and segmentations
- User management with individual desk, playlists, profiles and access rights
- High level search engine (geolocation, instruments, ethnic groups, etc...)
- Data providers : DublinCore, OAI-PMH, RSS, XML, JSON and other
- Multi-language support (now english and french)

Data model

Other objects

- Instrument, InstrumentAlias, InstrumentRelation, InstrumentAliasRelation, Performance
- Location, LocationAlias, LocationRelation, LocationAliasRelation
- EthnicGroup, Format, PhysicalFormat, Publisher and various other Enumarations (1D lists)
- Language (ISO 639-3)
- Revision, PlayList, Profile, etc...

All objects

4 Development

TimeSide : open web audio processing framework

Server side - TimeSide Engine

- **Do** asynchronous and fast audio processing with Python,
- **Decode** audio frames from ANY format into numpy arrays,
- **Analyze** audio content with state-of-the-art audio feature extraction libraries (Aubio, Yaafe, Vamp (experimental)),
- **Organize**, serialize and save analysis metadata through various formats,
- **Draw** various fancy waveforms, spectrograms and other cool graphers,
- **Transcode** audio data in various media formats and stream them through web apps,

Client side - TimeSide UI

- **Playback** and **interact** on demand through a smart high-level HTML5 extensible player,
- **Index**, **tag** and **organize semantic metadata**
(see [Telemeta](#) which embeds TimeSide).

SABIOD - Scaled Acoustic BIODiversity platform

Bioacoustic signaling is a primary mode of communication and exploration for most of the animals. It enables quick load and transfer of information without any visible contact with the target, tailoring the reduced visibility of deep forest (insect, frogs, birds, mammals...), cave or night activities (insects, bats), and/or the long distances like in ocean (krill, fishes, whales...). Bioacoustics is also one of the factors in optimizing natural selection, playing a significant role in signalling resource qualities to potential partners.

The SABIOD project aims to detect, cluster, classify and index bioacoustic big data in various ecosystems, at different space and time scales, in order to reveal informations on the complex sensori-motor loop, and on the health of an ecosystem, yielding to new biodiversity insights.

Keywords : Acoustics, Signal Analysis, Machine Learning

NEWS

- International Workshop on Neural Information Scaled to Bioacoustics (joint to NIPS 2013) 10th dec - deadline ext. abstract 13th oct.
- IEEE ATSP'14 last CFP - Special session on Bioacoustics Int. conf. on Ad. Tech. for Signal & Image Processing

The Telemeta Platform

The collaborative platform **Telemeta** aims to make sound archives available to researchers and to the extent possible, the public, in compliance with the intellectual and moral rights of collectors. Developed with the support of the program **TGE-Adonis** of the **CNRS**, allows researchers to exchange data online with communities, including through collaborative tools

like markers , spaces, comments, etc...

CREDITS

SABIOD is a **CNRS Big Data Interdisciplinary project**: 2012-2014

Laboratories : LSIS, LIP6, CNPS, MNHN, LIG, Géoazur

The DIADEMS project

- **DIADEMS** : Description, Indexation, Access to Sound and Ethnomusicological Documents
- Granted by ANR : french national research agency (ANR-12-CORD-0022)
- 3 years, 8 partners, 850 k€
- Apply and test MIR algorithms on large scale ethnomusicological data
- Define some high level interfaces to find new ways of explorations in large complex musical corpus
- New modes of collaboration between human science and computer science laboratories and researchers
- Define the **vocabulary** describing musical events in the usecase of ethnomusicology vs. signal processing
- <http://www.irit.fr/recherches/SAMOVA/DIADEMS/fr/welcome/>
- <http://diadems.telemeta.org>

DIADEMS - Partners

- Sponsors:

- CNRS
- Huma-Num (ex TGE Adonis)
- ANR
- CREM
- UPMC
- Parisson

- Partners :

- IRIT (université Paul Sabatier, Toulouse 3)
- LIMSI (universités Pierre et Marie Curie (UPMC, Paris 6) et Paris-Sud)
- LAM (institut Jean Le Rond d'Alembert, UPMC)
- LABRI (université de Bordeaux)
- CREM (université Paris Ouest Nanterre La Défense)
- LESC (université Paris Ouest Nanterre La Défense)
- Museum d'Histoire Naturelle de Paris
- Musée du Quai Branly

Development - Lessons

Lessons from a 7 year old project

- Simplicity is better than complexity (KISS)
- Modularity is only accessible with a flexible language (thanks Python!)
- Models and Objects are more important than Technologies
- A good workflow is defined by the users themselves through feedback and constant revisions
- Prototyping is a crucial part of the development process
- A good platform relies on standards, not on formats
- The Open Source ecosystem gives some **tremendous** possibilities to develop, deploy and scale any platform project

Development - TODO list

Telemeta

- Update code to support Django new Class based views
- Rewrite geolocation services
- Public and enhanced user playlists
- Smart breadcrumbs
- Better interactions with TimeSide
- Enhance user interface (full HTML 5 + web audio API)
 - For annotations and segmentations in a collaborative manner
 - Provide import capabilities and feedback loop between manual and automatic annotations
 - Fancy displays of automatic analysis results (zoomable + synchronized with audio)
 - Add a User interface to control and tune the analysis parameters
- More documentation
- [http://telemeta.org/report/1](http://telemeta.org/report/)

Development - TODO list

TimeSide

- Tiny web server based on Django (done)
- Process task manager (done)
- Full HTML5 zooming player (+ annotations, segmentations, etc..)
- Analyzer parameters (+ interface)
- Improve Vamp plugins support (Vamp python host ?)
- Add more automatic segmentation and classification tools to support various semantic ontologies (cf. thesaurus)
- Add more music analysis tools to support Ethnomusicological research
- Add automatic similarity analysis tools (inside a song or between sound items)
- Enhance analysis result displays to send to Telemeta
- <https://github.com/yomguy/TimeSide/issues>

Development - TODO list

SABIOD

- Automatic synchronization from hardware audio source
- Add bioacoustic detection models to TimeSide (bats, dolphins, whales, etc...)
- Add various bio taxonomies to Telemeta
- Extend audio sampling frequencies

The End

Thank you!

We are looking for new collaborations
in ecology and bioacoustic fields. Let's keep in touch!

TimeSide - Github repository

<https://github.com/yomguy/TimeSide/>

- 3 main branches: master, dev, diadems

Installation

<https://github.com/yomguy/TimeSide#install>

- Installation des dépendances :

```
$ echo "deb http://debian.parisson.com/debian/ stable main" |  
$ sudo tee -a /etc/apt/sources.list  
$ echo "deb-src http://debian.parisson.com/debian/ stable main" | sudo tee -a /etc/apt/sources.list  
$ sudo apt-get update  
$ sudo apt-get install git  
$ sudo apt-get build-dep python-timeside
```

- Installation depuis le dépôt *Github* :

```
$ git clone https://github.com/yomguy/TimeSide.git  
$ cd TimeSide  
$ git checkout dev  
$ export PYTHONPATH=$PYTHONPATH:'pwd'  
$ python tests/run_all_tests
```

Statistics - CREM revisions

CREM's Telemeta platform

- 2007: first partner: french Research Center of Ethnomusicology (CREM)
- 2007 - 2009: technical specifications, definition of the DB migrator
- 2008: prototype development
- 2008 - 2010: workflow and format specifications
- 2011: development, final migration and release of **Telemeta 1.0** to the CREM for production : <http://archives.crem-cnrs.fr>
- 2011 - 2014: collaborative indexing, more development, massive data imports...

Workflow

Example: CREM audio archive access rules vs. resource status
